

**CITY OF BRAZOS COUNTRY**  
**PWS Number TX0080025**  
**2021 Drinking Water Quality Report**

This is your water quality report for **January 1 – December 31, 2021**

The City of Brazos Country provides ground water from the Chicot and Evangeline Aquifers in Austin County, Texas

For more information regarding this report contact:  
 Name: Mary Lou Craig  
 Phone: 979-627-1037  
 Este reporte incluye informacion importante sobre el agua para tomar.  
 Para asistencia en espanol, favot de llamar al telefono (979) 627-1037.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at (800) 426-4791.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Contaminants may be found in drinking water that may cause taste, color, or odor problems. These types of problems are not necessarily causes for health concerns. For more information on taste, odor, or color of drinking water, please contact the system's business office.

You may be more vulnerable than the general population to certain microbial contaminants, such as Cryptosporidium, in drinking water. Infants, some elderly, or immunocompromised persons such as those undergoing chemotherapy for cancer; persons who have undergone organ transplants; those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders, can be particularly at risk from infections. You should seek advice about drinking water from your physician or health care providers. Additional guidelines on appropriate means to lessen the risk of infection by Cryptosporidium are available from the Safe Drinking Water Hotline (800-426-4791).

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. We are responsible for providing high quality drinking water, but we cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

**Information about Source Water** TCEQ completed an assessment of your source water, and results indicate that our sources have a low susceptibility to contaminants. The sampling requirements for your water system are based on this susceptibility and previous sample data. Any detections of these contaminants will be found in this Consumer Confidence Report. For more information on source water assessments and protection efforts at our system contact **Mary Lou Craig, 979.627.1037**.

**Source Water Name**  
 Standing Oaks Lane/Entrance/GW/Active  
 Standing Oaks Lane/GST/GW/Active

Public participation Opportunities – **City Council Meetings are held on the 3<sup>rd</sup> Thursday of each month at 7:00 pm. These are currently held at 329 Pecan Grove Rd in Brazos Country and are hybrid via Zoom. Login information is always posted on the Public Notice Boards at the BC entrances, as well as on the website [www.citybrazoscountry.org](http://www.citybrazoscountry.org).**

**Water Loss – The water loss audit has not been completed at this time.**

Lead and Copper	Date Sampled	MCLG	Action Level (AL)	90th Percentile	# Sites Over	Units	Violation	Likely Source of Contamination
Copper	2021	1.3	1.3	0.133	0	ppm	N	Erosion of natural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems.
Lead	2021	0	15	9.4	1	ppb	N	Corrosion of household plumbing systems; Erosion of natural deposits.

**2021 Water Quality Test Results**

Inorganic Contaminants	Collection Date	Highest Level Detected	Range of Individual Samples	MCLG	MCL	Units	Violation	Likely Source of Contamination
Arsenic	2021	2.7	2.7-2.7	0	10	ppb	N	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes.
Barium	2021	0.198	0.198 – 0.198	2	2	ppm	N	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits.
Fluoride	2021	0.16	0.16 – 0.16	4	4.0	ppm	N	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories.
Nitrate [measured as Nitrogen]	2021	0.36	0.36 – 0.36	10	10	ppm	N	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.

Radioactive Contaminants	Collection Date	Highest Level Detected	Range of Individual Samples	MCLG	MCL	Units	Violation	Likely Source of Contamination
Gross alpha excluding radon and uranium	2021	2	2 – 2	0	15	pCi/L	N	Erosion of natural deposits.
Uranium	2021	1.6	1.6 – 1.6	0	30	ug/l	N	Erosion of natural deposits.

Disinfectant Residual	Year	Average Level	Range of Levels Detected	MRDL	MRDLG	Unit of Measure	Violation (Y/N)	Source in Drinking Water
Sodium Hypochlorite	2021	1.1	0.5 – 1.8	4	4	Ppm	N	Water additive used to control microbes.

**Definitions:**  
**Action Level [AL]** – The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.  
**Action Level Goal [ALG]** The level of a contaminant in drinking water below which there is no known or expected risk to health. ALGs allow for a margin of safety.  
**Avg** –Regulatory compliance with some MCLs are based on running annual averages of monthly samples.  
**Level 1 Assessment** -A study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.  
**Level 2 Assessment** -A very detailed study of the water system to identify potential problems and determine (if possible) why E coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.  
**Maximum Contaminant Level [MCL]** – The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.  
**Maximum Contaminant Level Goal [MCLG]** – The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.  
**Maximum Residual Disinfectant Level [MRDL]**- The highest level of disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.  
**Maximum Residual Disinfectant Level Goal [MRDLG]** -The level of drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.  
**Treatment Technique [TT]** – A required process intended to reduce the level of a contaminant in drinking water.

**Secondary Constituents** Many constituents (such as calcium, sodium, or iron) which are often found in drinking water, can cause taste color, and odor problems. The taste and odor constituents are called secondary constituents and are regulated by the State of Texas, not the EPA. These constituents are not cause for health concerns. Therefore, secondaries are not required to be reported in the document but they may affect the appearance and taste of your water.  
**Secondary Constituents:** No contaminants found above limit.

**Other testing** **Organic Contaminants:** Testing waived, not reported, or none detected.  
**E Coli:** Reported monthly tests found no E Coli bacteria

**Unregulated Contaminant Monitoring Rule 3 [UCMR3]**  
 Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulation is warranted. Any unregulated contaminants are reported in the following tables. For additional information and data visit <https://www.epa.gov/dwucmr/second-unregulated-contaminant-monitoring-rule>, or call the Safe Drinking Water Hotline at (800)426-4791.  
**Unregulated Contaminants:** No contaminants found above detection limit.

**Abbreviations:**  
 MFL – million fibers per liter (asbestos measurement)  
 mrem – millirems per yr (measurement of radiation absorbed by the body)  
 NTU – nephelometric turbidity units  
 pG/L – picocuries per liter (measure of radioactivity)  
 ppb – micrograms per liter or parts per billion – or one ounce in 7,350,000 gallons of water  
 ppm – milligrams per liter or parts per million or one ounce in 7,350 gallons of water  
 ppq – parts per quadrillion, or picograms per liter  
 ppt – parts per trillion, or nanograms per liter  
 NA – not applicable  
 ND – none detected
